Large S.A.R. Matt Plates

Flood Coating Plates for Printing Color or Coatings on Corrugated Board

Maximum 68" x 118"

Soft 28A Durometer

We created this product to meet the corrugated industry's need for larger and softer printing plates for printing large solid areas. Conventional rubber and photopolymer materials are not available in soft durometer and large sizes.

The S.A.R. matt plates are light weight, soft, and flexible. They print with less board crush, better ink transfer and are less susceptible to handling damage than rubber or photopolymer.

The tractor lead edge J-Bar allows the plate to be side rolled for shipping and storage and also allows the plate to be rolled/folded forward, backwards and sideways without causing delamination, dents or wrinkles.

They are custom made to the customer's specifications for thickness, mounting and lock-up system.

For more information, contact customer service at (708) 489-3800 or by email at sales@leigraphics.com.
