

S.A.R. ULTRA LARGE FLOOD COATING PLATES With Optional Tractor Lead Edge

For Printing Color or Coatings on Corrugated Board

Up to 60" x 118"
Soft 28A Durometer

We created this product to meet the corrugated industry's need for larger and softer printing plates for printing large solid areas. Conventional rubber and photopolymer materials are not available in soft durometer and large sizes.

Luttrell Engraving's Ultra Large Flood Coating Plates are light weight, soft and flexible. They print with less board crush, better ink transfer and are less susceptible to handling damage than rubber or photopolymer.

The optional tractor lead edge J-Bar allows the plate to be side rolled for shipping and storage. It also allows the plate to be rolled/folded forward, backwards and sideways without causing delamination, dents or wrinkles.

Luttrell Engraving's Ultra Large Flood Coating Plates are made to your specifications for thickness, mounting and lock-up system.
