

Products & Services

We pride ourselves on being an innovative manufacturer of printing plates for the flexographic industry, providing prepress services that include graphic arts, plate making and plate mounting service. We also offer Heavy Duty Lead Edge Strips, FL-X Mount plates, and S.A.R. flood coating plates.

Our liquid and sheet photopolymer printing plates are produced from high quality materials for a wide variety of flexographic applications -- From simple one-color prints to multi-color point-of-purchase displays to high-tech process prints.

Our customers are manufacturers or direct purchasers of corrugated boxes, point-of-purchase displays, wide-web preprint, narrow web, paper and multi-wall bags.

With four photopolymer exposure units ranging in sizes up to 52" x 80", we can meet your needs for large one-piece plates and high volume output.

- * Full graphic art and design service
- * Optical pre-mounting up to 120"
- * Prepress Consultation
- * Press fingerprinting
- * On-site training and assistance

- * Four-color photographic process color
- * Color separations
- * Bar codes
- * Point-of-purchase multi-color displays

S.A.R. Flood Coating Plates

S.A.R. plates with tractor lead edge for side-rolling are ultra large, soft plates for printing color or coatings on corrugated board. They are custom made and press-ready up to 68" wide by any length. These special plates are light weight, have good ink transfer, resist damage from handling, side roll for shipping and crew ease of handling, and roll/fold in any direction. The soft, 28 durometer equals no board crush.

FL-X Mount Plates

With FL-X Mount plates you can roll or fold plates forward, backwards, and sideways without plate damage. *NO gluing + NO die sealing = NO failures!*

Heavy Duty Lead Edge Strips

Up until now, no product was available that is strong enough to prevent lead edge failures. Our new triple strength Heavy Duty Lead Edge Strips are designed to minimize the typical failures that are prevalent in the corrugated industry. These failures may be caused by press crew handling, heavy pressure loads, jam-ups, or by the plate moulder. Our triple strength strip prevents these failures and also produces a more rigid lead edge to the plate carrier.

Heavy Duty Lead Edge Strips are available in both single and double flange. They are sold in six foot and eight foot lengths, packaged 100 per box.
